

## DANCE FLOORS

### Modular Interlocking Dance Floors

**EverDance®** is EverBlock's **interlocking modular dance floor system**. It can be used for a variety of applications, indoors and outdoors at hotels, dance halls, in tents, at convention centers, and anywhere a dance floor is required.

The **EverDance** tile consists of a molded base, with a proprietary molded-in woodgrain pattern. Because the pattern is fully integrated with the base tile, the floor is completely waterproof and will not peel, delaminate, or get waterlogged.

### MULTIPLE DANCE FLOOR COLORS AND STYLES

Choose between Light Wood Parquet, Dark Wood Parquet, Grey Plank, Light Wood Plank, or alternate colors for a traditional checkered floor look. You can also use our solid colored EverBase to create colorful dance floors and patterns. Alternate both (wood and solid colors) to create amazing modern looks.

### EASY TO INSTALL AND REMOVE

**EverDance Floor** tiles are easy to install, remove, transport and store. Tiles come pre-assembled in easy-to-handle **3ft x 3ft** sections that can be stacked and stored when not in use.

### SUPERIOR, PROFESSIONAL FEEL UNDERFOOT

**EverDance Floors** provide a smooth surface suitable for professional dance, though is not slippery under foot. The torsional rigidity provided by the cross-ribs provides a stable feeling underfoot, while the rigid connection provided by the locking system prevents sections from sliding or separating during aggressive dance routines. The added thickness of the **EverDance floor** module allows it to be used on uneven surfaces, without a subfloor and provide a richness that competitive floors don't offer.

## DANCE FLOORS

### Modular Interlocking Dance Floors

#### TRANSITION EDGES PROVIDE A GRADUAL TRANSITION FROM THE GROUND BELOW

EverDance® can be placed on carpet, asphalt, tile, wood or other sub-floors and the transition edging will provide a gentle sloped **transition** from the ground surface below onto your dance floor. Edging also allows you to roll carts and other equipment onto the dance floor, while protecting the edges of the floor from damage.

#### RUN POWER CABLES UNDERNEATH

The **EverDance floor** features integrated cable channels underneath the floor, that enable you to **run power, communications or AV cables** underneath the flooring. Illuminate your dance floor by adding **LED** light strips.

#### USE OUTDOORS WITHOUT A SUB-FLOOR

**EverDance Floors** provide a smooth surface suitable for professional dance, though is not slippery under foot. The torsional rigidity provided by the cross-ribs provides a stable feeling underfoot, while the rigid connection provided by the locking system prevents sections from sliding or separating during aggressive dance routines. The added thickness of the **EverDance floor** module allows it to be used on uneven surfaces, without a subfloor and provide a richness that competitive floors don't offer.

#### USE AT

- Hotels & Banquet Halls
- Event & Convention Centers
- Houses of Worship
- Tented Events
- Schools & Museums
- Arenas & Recreation Centers
